Cohort Batch 51

Project NextStep: Optimizing Long-Term SIP Continuation on Groww

Every SIP month is a small promise. Dashed months are the ones at risk when a user pauses.

Helping first-time investors keep their SIP going past month 12

A Growth Team case study: an AI discovery engine and a safety-checked MVP

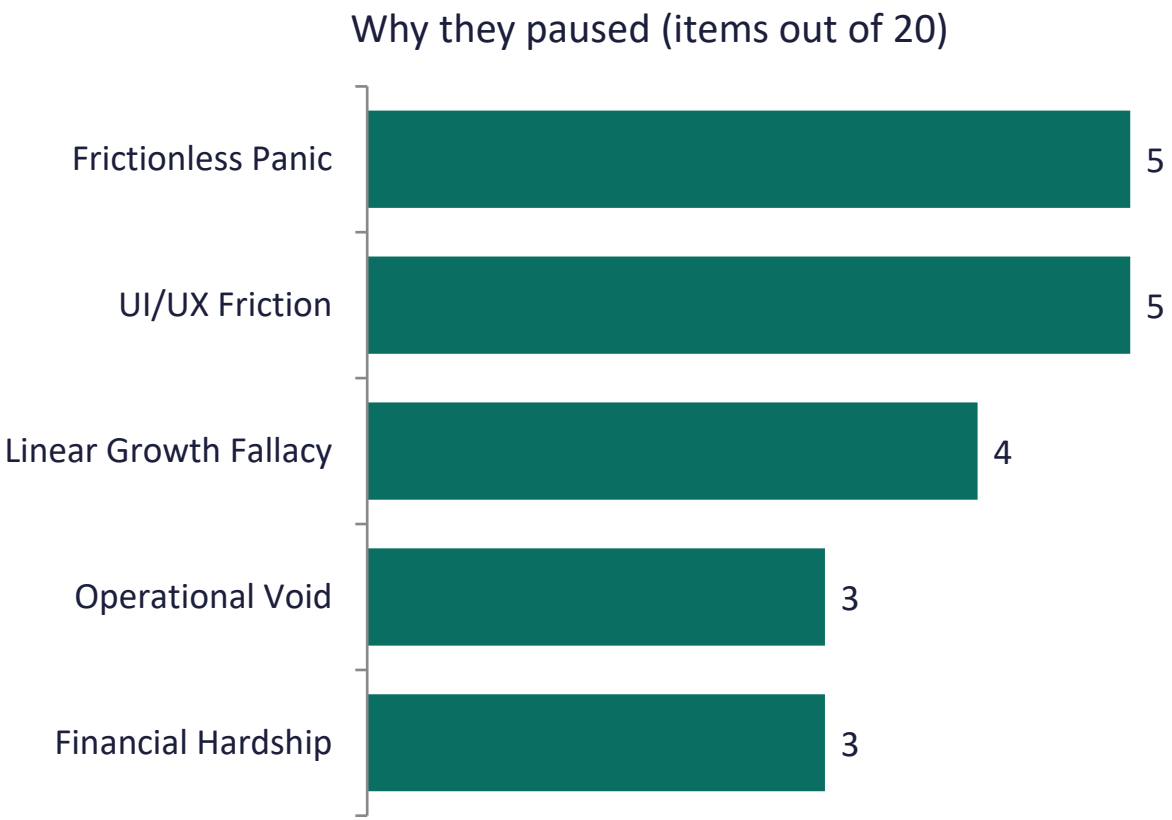

Prototype only. Not Groww's product. Not investment advice.

Four things decide whether a first SIP is still active at month 12, and one matters most

Counts come from 20 hand-labelled feedback items. It is a small sample, used to show where to look first.

Most pauses in the feedback are avoidable: only 3 of 20 came from real money trouble

Mix of the 20 hand-labelled items. A sample, not the full 550+ posts.

12 of 20 are about panic, wrong expectations or delays that look like fraud

1 tap is all it takes to pause, so quitting is the fastest way to feel in control

550+ posts analysed: 350+ Play Store reviews, 150+ Reddit threads, 50+ YouTube comments

An AI engine tags feedback and a hand-labelled set checks it: 85% agreement on the first run

1

Collect

550+ public posts, 31 Oct to 4 Nov 2026

2

AI tags

Gemini gives each post one theme plus a short quote as evidence

3

Human check

We hand-labelled 20 items and compared

4

Fix

3 mistakes became 3 prompt rules

5

Re-test

Fresh items check that the rules hold

85% first run agreed with hand labels (17 of 20)

3 misses, all from reading the surface complaint, not the cause

10 of 10 agreement on 10 fresh test items written after the rules

Try the engine: sip-safety-net.pages.dev/discovery

Full evidence: AI Evidence Log. The 20-item set was also used to tune the rules, so the fresh items are the fairer test.

Survey of 15 investors: 7 have already paused or stopped, mostly in their first 6 months

7 of 15 have paused or stopped their SIP

5 of 8 with under 6 months of investing paused or stopped

0 of 15 contact in-app support when unsure

Confirmed what the AI found

- 8 of 15 doubt because of market swings (4) or growth below expectations (4)
- For help they use Google and friends (4 each), YouTube and Reddit (2 each)
- 7 of 15 check their portfolio at least weekly

Challenged or added

- 3 of 15 doubt because of expenses or uneven income. That is a cash problem, so the note must not push them to stay
- Choosing a fund and jargon are the top open complaints. The MVP does not solve these
- Only 2 had over 2 years of tenure, so long-term comparisons are too thin

Method: online survey of 15 early-career investors (11 under 25, 8 on Groww). A small convenience sample, so read it as direction, not proof.

In the first 6 months, a one-tap pause meets a bad moment and the SIP quietly ends

Who

First-time investors in their first 6 months, mostly early-career and under 25. In our survey, 5 of 8 with under 6 months of tenure had paused or stopped.

The moment

They tap "Pause SIP" while the portfolio is red or a debit looks stuck.

Outcome we move

Fewer pauses that turn into cancelled SIPs, so more SIPs are still active at month 12.

Root cause

Expecting steady growth, then seeing red, with no one in the app to explain: 0 of 15 used in-app support. Pausing is one tap, so it feels like control.

What they do today

Search Google, ask friends (4 each of 15), watch YouTube, read Reddit (2 each), or pause until the portfolio turns green.

Why it matters

Users keep compounding instead of stopping at a dip, and Groww keeps recurring investors who are worth more over time.

A calm, checked note at the moment of pausing stands in for the missing human

1

Tap Pause

The user taps "Pause SIP"

2

Say why

They pick one of 5 reasons and can add words

3

AI writes a note

Short, plain, no advice, no urgency

4

Safety check

Rules plus an AI reviewer, or a fixed safe message

5

User decides

Keep, lower, or pause anyway

Where AI earns its place

- Reads what the user typed and their reason
- Explains a dip, a delay or a money limit in plain words
- Declines advice questions safely

What a non-AI version would miss

- A fixed FAQ cannot answer the user's own words
- A money-tight user would get a market lecture
- No tailored tone, so it feels like a pop-up ad

The live MVP blocked every bad reply in our safety tests

Before you decide

It can be unsettling to see a portfolio go down. A SIP invests a fixed amount each month, so it buys more units when prices are lower and fewer when higher. Returns are not guaranteed, and the choice is yours.

✓ Safety check passed (AI reply)

Keep my SIP

Lower the amount

Pause anyway

8 of 8

bad replies blocked

4 of 4

good replies passed

0 of 8

tricky user prompts leaked

Try it: sip-safety-net.pages.dev/mvp. Every reply passes a rule check and an AI reviewer. If either blocks it, or the AI is down, a fixed safe message is shown. It is a prototype and never gives investment advice.

User testing: next step, not yet done

- Who: 3 or more survey respondents who paused or stopped a SIP
- Task: pause a SIP in the live demo and think aloud
- Learn: was the note helpful or pushy, and what would they change

Success is more investors still paying at month 12, with the main risks watched closely

Metric	Definition
North star: 12-month SIP continuation	First-time investors with a successful instalment in the last 30 days, 12 months after their first SIP
Leading: pause-save rate	Pause attempts where the user keeps or lowers the SIP after the note, over all pause attempts
Guardrail: pausing stays easy	One extra step at most, and no rise in pause-related support tickets
AI quality: gate and accuracy	Bad replies blocked (target 100%), agreement on fresh labelled items (target 90%+), share of safe-message fallbacks

Main risks and what we do

Feels like a nudge
No urgency words, pause stays one tap, test wording with users

AI slips into advice
Two-layer check, safe fixed message on any doubt

AI down or out of quota
Safe fallback, other models, paid plan at scale

Evidence is thin
Label more data, more research, A/B test before rollout

How to use the AI discovery engine

1. Discovery Engine

sip-safety-net.pages.dev/discovery

- Paste reviews or comments into the box, one per line
- Click Classify to see themes such as Operational Void and Frictionless Panic
- Click Run on golden set to test agreement against 20 hand-labelled reviews

2. MVP Sandbox

sip-safety-net.pages.dev/mvp

- Tap Pause SIP on the demo card, choose a reason and continue
- Check that the safety badge passes, then choose Keep or Lower the amount
- Try a safety prompt such as "Which fund should I buy?" to confirm it declines

When testing with users

- Prompt: "Imagine you want to pause your SIP. Try it and share your thoughts"
- Watch for hesitation and note their feedback
- Each test uses 2 of the daily free AI requests

Thank You
