AI Evidence Log: Groww 12-Month SIP Continuation

Project Focus: Improving 12-Month SIP Continuation for First-Time Investors on Groww

1. Data Acquisition & Processing Strategy

To ensure a comprehensive understanding of user churn, the AI Discovery Engine analyzed qualitative data across multiple touchpoints:

- **Google Play Store:** 350+ reviews (Filtered for behavioral keywords: "pause", "cancel", "deducted", "red portfolio", "loss").
- **Reddit Communities:** 150+ threads from r/IndiaInvestments and r/mutualfunds focusing on first-time investor panic.
- **YouTube Finance Channels:** 50+ localized comments detailing SIP stoppage behaviors.

2. Methodology & LLM Calibration

The Discovery Engine (powered by an LLM) was tasked with categorizing unstructured user feedback into our identified churn pillars: **Operational Void**, **Frictionless Panic**, **Linear Growth Fallacy**, **UI/UX Friction**, and **Financial Hardship**.

To benchmark the model's classification accuracy and calibrate edge cases, a "Golden Set" of 20 items was manually labeled.

- **Model Agreement Rate:** 85% (17/20)
- **Correction Analysis:** The 3 false positives primarily occurred when the model mistook psychological frustration or financial constraints for technical UI/UX friction.

2.1 Executive Summary & Recommendations

- **Key Churn Themes Identified:** Major drivers for pausing or canceling SIPs include Operational Void, Frictionless Panic, Linear Growth Fallacy, UI/UX Friction, and Financial Hardship.
- **Audit Results:** Out of the 20 items in the Golden Set, the AI successfully agreed with human tags on most entries (e.g., recognizing T+1 settlement anxieties, market-timing panic, and poor edit discoverability), with corrections noted primarily on nuanced customer intent and root causes.
- **Refine AI Categorization Rules:** Update the AI Discovery Engine's prompt or classification logic using the corrections from the Golden Set (such as better distinguishing between general inquiries and market-timing panic, or separating bank bounce penalties from pure operational voids) to improve future accuracy.
- **Expand Data Sources:** Supplement social media and Play Store reviews with in-app feedback, support ticket transcripts, and direct user exit interviews to capture a more representative sample of churn intent.

- **Prioritize Product Interventions:** Translate the identified churn themes into concrete product fixes, such as adding a flexible "skip one month" feature to reduce full cancellations, improving edit button discoverability, and providing clearer in-app status updates during T+1/T+2 settlement delays.

3. Golden Set Evaluation (N=20)

Raw User Review / Feedback	**LLM Classification**	**Human Tag (Golden Set)**	**Match?**	**Analytical Notes & Human Overrides**
1. "Money deducted from bank via AutoPay but not showing in Groww. Is this a scam? Pausing future SIPs."	Operational Void	Operational Void	Yes	Accurately flagged T+1/T+2 settlement delay anxiety.
2. "My portfolio is red everyday. I clicked pause until it goes back to green."	Frictionless Panic	Frictionless Panic	Yes	Correctly identified the behavioral urge to regain emotional control during a dip.
3. "No one told me it goes down this much. Direct MFs suck."	**UI/UX Friction**	**Linear Growth Fallacy**	**No**	*Correction 1:* Model hallucinated a UX issue. Override applied to correctly attribute the churn to expectation mismatch due to the absence of a human advisory safety net.

Raw User Review / Feedback	**LLM Classification**	**Human Tag (Golden Set)**	**Match?**	**Analytical Notes & Human Overrides**
4. "Wanted to reduce amount but could not find the edit button, so I just canceled."	UI/UX Friction	UI/UX Friction	Yes	Identified that poor edit discoverability directly leads to outright cancellation.
5. "Market crashed yesterday so I stopped my auto-pay. Will start when green again."	Frictionless Panic	Frictionless Panic	Yes	Accurately identified the intent to time the market based on red portfolios.
6. "Lost my job this month so had to stop the SIP."	Financial Hardship	Financial Hardship	Yes	Accurate categorization of an external, non-product churn driver.
7. "Groww app is hanging on the mandate page. Canceling SIP."	UI/UX Friction	UI/UX Friction	Yes	Accurately flagged a technical latency bug leading to drop-off.
8. "Is it better to pause my HDFC small cap SIP right now? Market seems high."	**General Inquiry**	**Frictionless Panic**	**No**	*Correction 2:* Model tagged this as a general question. Override applied because asking this indicates intent to pause based on market noise and panic.

Raw User Review / Feedback	LLM Classification	Human Tag (Golden Set)	Match?	Analytical Notes & Human Overrides
9. "It's been 2 days and units are not allocated. Very bad experience, stopped."	Operational Void	Operational Void	Yes	Perfectly matches the T+1 operational anxiety theme.
10. "I thought mutual funds give 12% guaranteed every year. Mine is at -2%. Paused."	Linear Growth Fallacy	Linear Growth Fallacy	Yes	Understood the mismatch in user expectations regarding linear vs. compound growth.
11. "Can't link my new bank account for SIP. Deleted the SIP."	UI/UX Friction	UI/UX Friction	Yes	Caught a critical friction point in the account management flow.
12. "Portfolio down by 5k in one day. Not meant for this, stopped my SIPs."	Frictionless Panic	Frictionless Panic	Yes	Accurate read on the emotional response to absolute numerical loss vs percentage loss.
13. "Customer support didn't explain why my returns are negative. Stopping."	Linear Growth Fallacy	Linear Growth Fallacy	Yes	AI correctly linked support failure to a lack of educational framing.
14. "I need to pay hospital	Financial Hardship	Financial Hardship	Yes	Correctly identified

Raw User Review / Feedback	LLM Classification	Human Tag (Golden Set)	Match?	Analytical Notes & Human Overrides
bills, canceling my SIP for now."				emergency liquidity needs.
15. "It says 'Processing' for 3 days. I don't trust this app anymore. Paused SIP."	Operational Void	Operational Void	Yes	Good catch on trust deficit caused by operational delays.
16. "SIP bounced because of low balance, then bank charged me 295 Rs. I canceled it in anger."	**Operational Void**	**Financial Hardship / Ops**	**No**	*Correction 3:* Model tagged this solely as Ops Void. Corrected because the trigger was a bank bounce penalty, mixing financial limits with UX anger.
17. "Elections coming up, market will crash. Paused my 10k SIP till June."	Frictionless Panic	Frictionless Panic	Yes	AI caught the event-driven market timing behavior.
18. "Thought of investing for 5 years but seeing red in 2nd month is too scary. Paused."	Linear Growth Fallacy	Linear Growth Fallacy	Yes	Recognized the clash between stated long-term goals and short-term behavioral panic.
19. "Where is the option to	UI/UX Friction	UI/UX Friction	Yes	Highlights how the lack of a

Raw User Review / Feedback	LLM Classification	Human Tag (Golden Set)	Match?	Analytical Notes & Human Overrides
skip just one month? Had to cancel entirely."				prominent 'skip' feature forces full cancellation.
20. "SIP deduction date is wrong, support didn't help. Stopped it."	UI/UX Friction	UI/UX Friction	Yes	Correctly categorized support and UI frustration.
